- Heavy-duty stainless steel blades blend sauces, dips, spreads, and smoothies in seconds
- 1 gallon stainless steel container with 2-piece lid and 2 handles for extra convenience
- 120V, 1800W

Certifications

NSF Listed

Hand Wash Only

ETL US

5-15P

Notes & Details

The AvaMix BX1GRG high volume commercial food blender will have you whipping up large batches of sauces, dips, salsa, and smoothies in no time! This blender boasts a powerful 3 3/4 hp motor that operates at 26,000 RPM on its highest speed. An impressive motor will make this model the workhorse of your kitchen that can handle the toughest blending jobs. It's the perfect combination of power and control that will handle any blending job, making your life easier in the kitchen and expanding your menu possibilities.

With 3 speed options from low to high, as well as a pulse button that allows you to throttle quick bursts of power when needed, this model gives you complete control over the blending process. The blender utilizes slow start blending in order to break down larger ingredients before getting up to blending speeds. This not only prevents messes but also takes some of the strain off of the motor to help increase its overall lifespan.

With a hefty 1 gallon capacity jar, you'll find yourself loading up the blender much less frequently than on traditional, smaller blenders. The jar features two integrated handles to provide more stability as you are transporting and pouring from it. Made of durable stainless steel, this blender jar will hold up to the wear-and-tear of a commercial kitchen and provide corrosion resistance to keep your equipment and your products looking great. Plus, as opposed to plastic jars that are prone to scratching, clouding, and hazing, this stainless steel jar is built for maximum durability. It's also great for keeping cold foods chilled and hot foods warm. This makes it useful for storing contents in a refrigerator or for blending hot soups.

A clasp fitted onto the jar attaches to, and locks down, the lid so no overflow occurs during operation. The 2-piece lid design allows you to add ingredients while blending without having to remove the lid or stop the motor. Just simply remove the clear center plug and replace it when you are finished adding ingredients. Non-skid feet at the base of the blender help to further eliminate the probability of movement and spillage during operation. This unit requires 120V electrical connection for operation.
